The Mercedes-Benz SLR McLaren is a Supersportscar that was developed by Mercedes-Benz and McLaren - these cars were produced in Portsmouth and finished / completed in Woking . The SLR has a supercharged V8 engine with 5,4 liters capacity that delivers 626 PS in standard version. To achieve better weight positions the engine is mounted behind the front axle ( front-middleengine) - benefit is a much better handling. The SLR has a special exhaust system that ends at the sides of the car behind the front axle (sidepipes). The whole body is made from Carbon.

The SLR 722 S has an output of 650 PS - about 300 pieces/parts were changed and optimized to have this result. Lighter oiltanks, exhaust in Aluminium, many part in Carbon, and over a hundred hours of work on the car in the windtunnel ment precise handling and steering even at a speed over 300 km/h.

This rare McLaren 722 S Roadster - one of only 150 that were produced ) was in Storage and did only 59 km in its total life . The SLR left the factory in Woking in 2009 and received a german registration in 2011 ( for 1 day ). Super rare opportunity to buy a new SLR 15 years after production !
